

# Forging Reciprocators

## ■ Forging

*Industry-proven, cost effective reciprocators*

**O**ur forging reciprocators are industry-proven to cool and coat at record times providing you with an accurate and highly efficient automated spray solution. These extremely cost effective reciprocators have the ability to spray water for cooling, thereby reducing expensive lube consumption. With custom manifolds designed for any forging job, we have the spray solution that's right for you.

- One or two axis available
- Industry proven to cool and coat quickly and efficiently
- Ability to spray graphite or synthetic lube
- Water is sprayed for cooling to reduce lube consumption
- Our standard strokes begin at 24" and increase in 6" increments
- Servo and pneumatic drives
- Custom designed manifolds
- Ability to sweep or pinpoint spray
- Nozzles are protected from heat area (Fig.1)
